Profile Summary

QA Automation Engineer with nearly 4 years of experience in **Test Automation, API Testing, Manual Testing, and Quality Assurance**. Skilled in building scalable automation frameworks using **Playwright (TypeScript), BDD Cucumber, and Page Object Model (POM)**. Experienced in **API Testing, SQL validation, Jenkins CI/CD integration, and Regression Testing** within Agile Scrum environments. Proven track record of improving automation coverage, reducing execution time, and enhancing test reliability through robust automation solutions. Hands-on experience with **GitHub Copilot** and **Playwright MCP Server**. **Immediate Joiner** with a strong automation-first mindset and focus on continuous improvement.

Technical Skills

Automation Testing: Playwright (TypeScript), UFT, Parallel Execution, Regression Suite Optimization

Testing Types: Manual Testing, Functional, Regression, Smoke, Integration Testing

Frameworks: Page Object Model (POM), Data-Driven Framework, BDD (Cucumber)

Test Activities: Test Case Design, Test Execution, Defect Reporting, Defect Lifecycle Management

Programming Languages: Java, TypeScript, SQL

API & Backend Testing: Postman, Playwright API Testing, SQL Data Validation

Performance Testing: Apache JMeter (basic load testing, analysis)

CI/CD & Tools: Jenkins, Git, Jira

AI-Assisted Development: ChatGPT, GitHub Copilot, Playwright MCP Server (AI-assisted browser automation, debugging, test execution)

Education

AISSMS IOIT

Bachelor of Engineering in Computer Science

April 2022

Pune, Maharashtra

Key Strengths

- Strong debugging and analytical skills
- Automation-first and quality-driven mindset
- Quick learner with ability to adapt to new tools and technologies
- Strong understanding of SDLC & STLC
- Effective communication and cross-functional collaboration
- Focus on test stability, maintainable frameworks, and continuous improvement

Experience

Siemens Technology & Services Pvt Ltd

QA Automation Engineer

July 2022 – Current

Bangalore, Karnataka

Project: Electronic Data Interchange (EDI)

- Designed and implemented **scalable BDD-based automation frameworks using Playwright (TypeScript)**
- Designed, developed, and maintained **300+ test cases** using Playwright (TypeScript) covering functional, regression, and integration testing scenarios.
- Enhanced and refactored the **Page Object Model (POM)** to improve framework reusability, readability, and maintenance
- Actively participated in the **migration of legacy UFT automation framework to Playwright**, converting and rewriting automation scripts
- Designed and generated Playwright test cases covering critical business workflows, increasing overall **automation coverage by 15%**
- Reduced test execution time by **35%** by leveraging Playwright features such as parallel runs, headless execution, and efficient selectors

- Improved test reliability by eliminating flaky tests and implementing proper wait strategies and assertions
 - Developed and executed **API automation scripts** using **Postman and Playwright**, validating response payloads, status codes, and business logic
 - Generated **Cucumber test reports** and shared execution summaries with stakeholders
 - Executed SQL database validation to verify data integrity and consistency across UI, API, and backend systems.
 - Integrated Playwright automation framework with Jenkins CI/CD pipelines, enabling automated regression execution and faster release validation.
 - Conducted performance testing using **Apache JMeter** and analyzed system behavior under load conditions
 - Contributed to reducing **production defect leakage** through improved automation coverage and reliable regression execution
 - Contributed to **test strategy, identifying high-risk areas and prioritizing automation** for critical business workflows
 - **Owned automation coverage** for critical modules, improving regression efficiency and reducing production defects
 - Collaborated with **product owners, developers, and business stakeholders** to understand **requirements, define test strategies, and ensure quality delivery**
 - Actively participated in Agile ceremonies including sprint planning, stand-ups, and retrospectives
- ### AI-Driven Testing Contributions
- Leveraged GitHub Copilot and Playwright MCP Server to support Playwright automation development and AI-assisted testing workflows
 - * Accelerated test script creation, debugging, and framework enhancement through AI-assisted workflows
 - * Utilized automated UI inspection and locator discovery to improve automation efficiency
 - * Improved test coverage through intelligent test scenario generation and edge-case analysis
 - * Enhanced automation maintainability through code optimization and locator strategy improvements
 - Improved automation delivery speed while ensuring manual review, code quality, and adherence to framework standards

Key Achievements

- Actively upskilling in testing tools, frameworks, and best practices through continuous self-learning
- Hands-on implementation of Playwright MCP Server to evaluate AI-driven testing and browser automation capabilities.
- Improved automation coverage by 15% .
- Reduced test execution time by 35% through parallel execution and framework optimization.
- Improved test stability by eliminating flaky test scenarios.
- Successfully migrated legacy UFT automation scripts to Playwright framework.
